

# SUSTAINABILITY INITIATIVES

Zegen, LLC acknowledges the impact of manufacturing, selling, shipping, using and disposing of our products. In order to meet our company's sustainability statement, we focus on the following initiatives:

## Being Efficient

As most energy is derived from non-renewable sources at present, we actively pursue all opportunities to increase our efficiency. We focus our efforts to ensure that our manufacturing and distribution processes are as efficient as possible. Our processes incorporate methods of manufacturing to reduce our use of air, power and water.

## Using Recyclable materials:

Any material (or product) that can be recovered and reprocessed into usable product is considered to be recyclable. We are using raw materials such as PP and PET that are 100% recyclable. PP and PET scraps are also 100% recyclable to make Industrial products.

## Recycle and Reuse

We focus significant amount of resources to invest in our manufacturing. Enabling our processes to increase in its capacity to reuse the recycled content of our own internal postindustrial scrap.

## Research and Efforts in Material Reduction:

Disposable products are made from existing materials can be reengineered in an effort to reduce environmental impact. We want to be the leader to make every effort in our research to further this initiative in our products to reduce waste and our environmental impact while still maintaining the same or even increased our product performance.

## Options of using Recycled content materials:

Disposable products that are made with post-consumer/industrial fiber (PCF) or with recycled PET/PP (RPET) reduce demand for virgin raw materials. We offer the options for our local (Asia) customer to use Post-Consumer Recycled Content that is any material recovered and reprocessed after consumer use. It gives the customer options to utilize recycle products made with recycled content which will cause the sustainability loop becomes even stronger.

We are committed to bring to the market place innovative and environmentally friendly products in an ethical manner consistent with our principles and culture.
